JupyterLab

Python 3.13 (XPython)

```
        route.append(current)
        current = parent[current]

    route.reverse()

    print("Delivery Route Optimization")
    print("Warehouse:", start)
    print("Delivery Location:", end)
    print("Shortest Route:", " -> ".join(route))
    print("Total Distance:", distance[end], "km")
```

```
Parshwa Ajit Sankpla SE-B-54
Delivery Route Optimization using Dijkstra's Algorithm
Delivery Route Optimization
Warehouse: Warehouse
Delivery Location: D
Shortest Route: Warehouse -> B -> A -> C -> D
Total Distance: 10 km
```
